

# Ultra Heater Day&Night

AQUAEL

Sensitive at day  
and at night

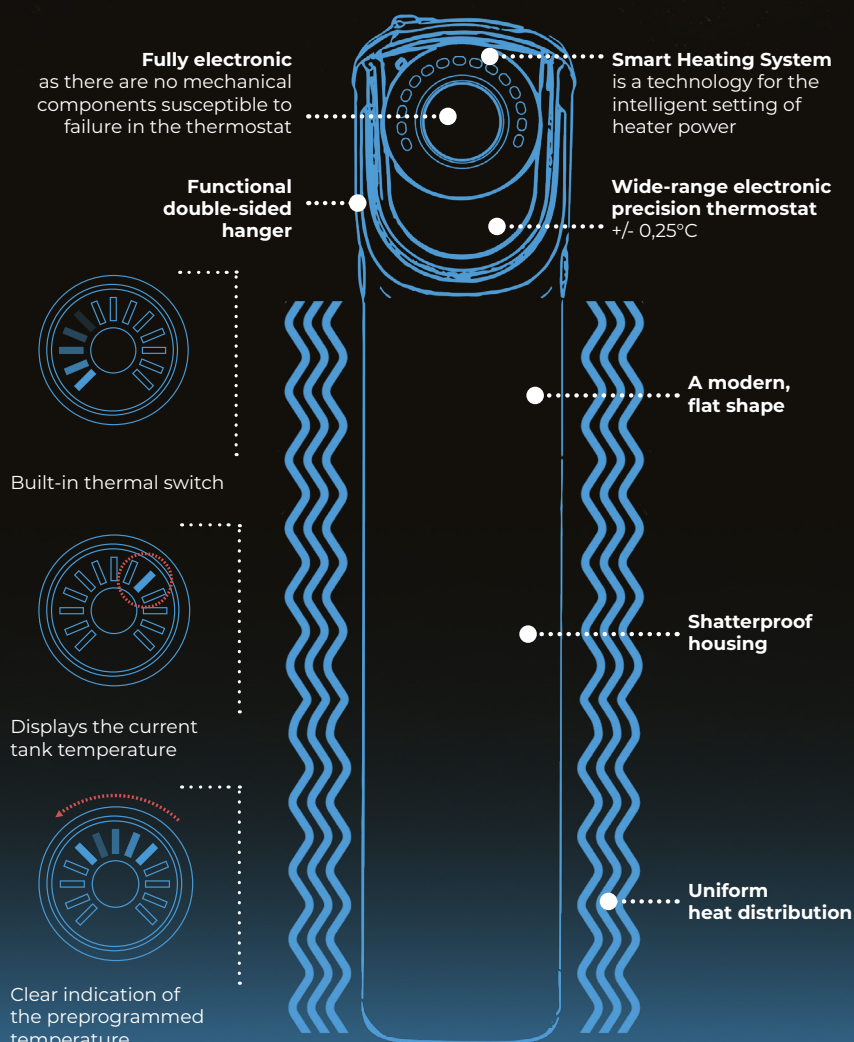

The Ultra Heater Day&Night heater will keep the aquarium water at a precisely constant temperature around the clock, or reproduce the diurnal amplitude as in natural aquatic ecosystems.

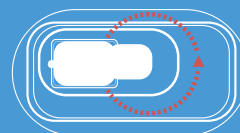

# Ultra Heater Day&Night

Take the utmost care of the thermal comfort of even the most sensitive aquarium organisms with the innovative features of the Ultra Heater Day&Night.

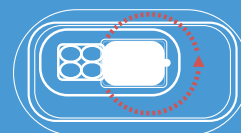

## DAY & NIGHT SENSOR

Intuitive change of the heater mode

### OFF Constant mode

the same temperature during the day and at night

### ON D&N mode

different temperature during the day and at night

In order to create thermal conditions in the aquarium as close to natural as possible, we have equipped the Ultra Heater with the Day&Night system. This functionality makes it possible to reproduce the diurnal temperature amplitude characteristic of natural aquatic ecosystems in the aquarium. All you have to do is select the appropriate mode of operation of the heater and program the temperatures at which the device is to work during the day and at night. As the evening approaches, the sensitive sensor will react to the reduced access to light, and the heater will automatically start working in night mode. This means that the water temperature in the aquarium will gradually decrease to the value you indicate. A similar process will take place with sunrise – the Ultra Heater Day&Night heater will gradually heat the water until it reaches the desired temperature.

Ultra Heater D&N	25 W	50 W	75 W	100 W	150 W	200 W
